In February 2020, driven by the need to upgrade a screen printing unit for embellishment, MULTISTAMPA installed a CARTES GT360 printing and embellishment line, and it was “Love at First Sight”! Shortly after, three more CARTES lines followed, one of which is fully equipped with the digital embellishment system Jet D-Screen, awarded as the world’s best technological innovation in 2023.

The introduction of CARTES technology led to exponential growth for MULTISTAMPA, which, in just about two years, has tripled its turnover. And today, five years later, MULTISTAMPA is preparing to install its sixth CARTES machine. The new machine is a GEMINI GE364 E-LINE, combining digital embellishment units like Jet DScreen (JDS), the innovative and patented Laser die-cutting, inspection and packaging systems, along with a highly efficient semi-automatic roll change system at the output.

“In the past five years, we have embarked on a challenging journey in

terms of quality investments and innovative growth,” confirms Daniele Lelli, co-owner of MULTISTAMPA.

“The expansion of our production site, including the installation of an additional photovoltaic system, will be completed shortly, and our next goal will be focused on sustainability and ISO14064 certification,” continues Lelli.

“With these important goals, the energy efficiency made possible by CARTES technologies allows us to recover 30% of energy consumption, a highly significant figure for achieving certification and moving towards sustainability.”

Energy efficiency, combined with digitalization and waste reduction, makes MULTISTAMPA a highly sustainability-oriented label manufacturer. The collaboration between MULTISTAMPA and CARTES continues with passion and innovation, facing ever more exciting challenges. ■
